a Feature-acquisition and prediction-target timelines
F1 · Day 0
F2 · Day 1
F3 · Day 1
F4 · Day 1
F5 · Day 5
F6 · Day 7–10
F7 · Day 46
WBC, age
+ blast %
+ immunophenotype, 51 flow markers
+ non-risk clinical factors (branch)
+ CNS, Day-5 blasts, Initial Risk
+ fusion genes, karyotype, FISH
+ D19 and D46 MRD
Targets, each predicted from the latest level available before the decision
D19 MRD, D46 MRD
Final Risk, relapse, EFS, OS
b Data-accumulation timeline
2015
2016
2017
2018
2019
Split 1
Split 2
Split 3
train (earlier years)
test (later years)
External cohort: 41 patients, two hospitals (no retraining, no recalibration)
c Two ways to predict at each node
Zero-shot LLMs (4 models) no training data; ensemble = mean of the four
Trained models DT / RF / RSF on the accumulating case database
Retrieval-based belief revision + LLM clinical narrative
